

## London Boom Lift Training

London Boom Lift Training - Elevated work platforms, likewise referred to as aerial platforms, allow workers to perform tasks at heights which would otherwise be not reachable. There are different types of lifts designed for different site conditions and applications. If operated carelessly, elevated work platforms could cause serious injury or fatality. The most common causes of related accidents are falls, electrocution, crushed body parts and tip-overs. Lift operators should be completely trained in techniques to prevent accidents while operating lifts.

Aerial Lift Safety course is intended for individuals who should operate the devices more safely and effectively. The course provides thorough instruction on the most used lifting devices within the business.. Kinds of lift covered include scissor, articulating and boom supported aerial lifts. The video presents the correct techniques operators should follow. Instruction focuses on pre-operational check, protection against falls, stability of the device and safe driving procedures.

The boom lift training program would help to address equipment reliability and employee safety, utilizing materials which are completely compliant with your local and regional requirements and regulations. Course management and training methods will be taught. The trainer would likewise know the technical aspects of aerial lift safety.

Components of the Boom Lift Training course comprise both practical training and classroom training. Both sessions must be completed successfully for the participant to receive a certificate of achievement.

The self-propelled boom-supported elevating work platforms are different from the self-propelled elevating work platforms in that they are able to position their work platforms totally beyond the base of the machinery. The theoretical training component is almost identical for both types. The practical training component can be completed sooner if only one kind of equipment is used.

Elevating Work Platform Training Program Objectives:

Aerial Platform/Boom Lift Training provides competency requirements for safe operation of Boom-Type Elevating Work Platforms and Self-Propelled Elevating Work Platforms (for use on paved/slab surfaces). Training would help operators to make more efficient use of elevating work platforms whilst decreasing the chances of a costly accident in the workplace. Trainees will review of company policies and applicable rules, discuss Due Diligence, study Criminal Negligence and consequences to employers, trainers, supervisors and workers. Participants will study machine features, operating procedures, stability, charging/fueling procedures and parking. Site-specific safety matters will be addressed.
